DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8, 10-13 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Hamagishi 5855425.

First passive array 2 which is moved (see figure 1), second array with subarrays 1 forming an image. Lacking from the disclosure is the system being of the integral photography type or the images converging to a virtual point. Both are the same question, as if the system is used to display an image recorded using the virtual photography method, the images will converge a virtual point. Therefore these limitations are considered to be intended use and therefore met, as the system of Hamagishi has the configuration necessary to display an integral photography image. As the second passive array can be moved, the rays have their angles changed.

Both lenses and slits are shown. Manual adjustment is shown (figure 18)

Relative movement between the arrays is discussed (col. 6, lines 30-55). Which element moves in respect to which is a question of perspective, as they both move in respect to each other.

Claim Rejections - 35 USC § 103

Claims 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hamagishi 5855425.

Observer tracking is discussed (col. 10, lines 53-56). As eye tracking was well known to be the most accurate form of observer tracking, eye tracking would have been obvious for that reason.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure..
